(54) CARD TYPE ELECTRONIC EQUIPMENT

(57) Abstract:

PROBLEM TO BE SOLVED: To ensure injecting operation by fixing an injection part to a card frame by the restraint of a restraining part and a recessed part provided at the holding wall of the card frame so as to prevent the peeling of the injection part.

SOLUTION: The injection part 40 for drawing out a card connector 29 in the direction of detaching it from an external device is provided with a restraining part 42 lying in a row with a grasping part 41 for grasping by a hand, the holding walls 31a to 31c of the card frame 26 are provided with the recessed part 45 positioned on a side opposite to the card connector 29 to restrain the restraining part 42, and the injection part 40 is fixed to the card frame 26 by the restraint of the restraining part 42 and the recessed part 45. Consequently the injection part 40 and the card frame 26 are mechanically and tightly combined to prevent the peeling of the injection part 40 along with the deterioration of adhesive better than an existent one using adhesive so that injecting operation is ensured.
